

Installation & Test Guide

For HP LaserJets & MFPs with 144 Pin DIMM

Extending the Resources and Abilities of Your Printer

1

Use the power switch to turn off the printer and then unplug the power cord from the printer.

2

Unplug all remaining cables and cords from the printer.

3

Carefully open the DIMM access door located on the left side of the printer.

4

Remove the DIMM from the anti-static bag it came in, grasping the DIMM along the top edge away from the gold contacts.

5

The DIMM has a notch cut in the edge between some of the gold contacts. Orient the DIMM so this notch aligns with the bump in the printer's connector and insert the DIMM into the connector.

6

Press the DIMM body in until the metal retaining pins click.

7

Close the DIMM access door, reconnect all cables and cords, then turn the power switch on.

Congratulations!

You are now ready to print MICR using your printer. The CD that came with your MICR Font Solution contains an application for testing the new capabilities.

1. Insert the CD in your CD/DVD drive and use Windows File Explorer to browse the CD and double-click on DirectPrint.exe.
2. In the "Filename" section, click the "..." button. Browse to select the file "PCL5 Font List.prn" also located on the CD.
3. In the "Printer/IP" section, select the printer from the dropdown list or enter the IP address if it is attached to the network.
4. Select the "Print" button.
5. Compare the printed font list first page to the reverse side of these instructions. Some variation may exist for different printer models. The MICR font appears on a later page of the font list.
6. Select the "Exit" button to close the application.
